

Table of Contents

Suggestions for the Day of the Exam	5
Multiple Choice Test Taking Strategies	6
Strategies for the New York State Teacher Certification Examination	7
Constructed-Response Assignment	10
The New York State Teacher Certification Examination: General Information	11
Learner-Centered Proficiencies	12
Cooperative Learning.....	13
Bloom’s Taxonomy of Levels of Thinking	14
New York State Code of Ethics for Educators	15
Background on the Development of the Code.....	16
Test Competencies: Field 06: Biology.....	18
Discussion of Competencies	26
Competency 0001 - Understand the general relationships and common themes that connect mathematics, science, and technology.....	26
Competency 0002 – Understand the historical and contemporary contexts of biological study and the applications of biology and biotechnology to society the earth	27
Competency 0003 – Understand the process of scientific inquiry and the role of observation and experimentation, and communication in explaining natural phenomenon..	29
Competency 0004 – Understand the processes of gathering, organizing, reporting, and interpreting scientific data, and apply this understanding in the context of biological investigations	31
Competency 0005 – Understand and apply principles and procedures of measurement used in the biological sciences.....	37
Competency 0006 – Understand the use of equipment, materials, chemicals, and living organisms in biological studies and the application of procedures for their proper, safe, and legal use.....	39
Competency 0007 – Understand cell structure and function, the dynamic nature of cells, and the uniqueness of different types of cells.....	44
Competency 0008 – Understand chemistry and biochemistry to analyze the role of biologically important elements and compounds in living organisms	47
Competency 0009 – Understand raw materials, products and significance of photosynthesis and cellular respiration and the relationships of these processes to cell structure and function.....	50
Competency 0010 – Understand the structure and function of DNA and RNA.....	51
Competency 0011 – Understand the procedures involved in the isolation, manipulation, and expression of genetic material and the application of genetic engineering in basic and applied research.....	52
Competency 0012 – Understand the cell cycle, the stages and end products of meiosis and mitosis, and the role of cell division in unicellular and multicellular organisms	53
Competency 0013 – Understand concepts, principles and applications of classical and molecular genetics	57
Competency 0014 – Understand the principles of population genetics and the interaction between heredity and environment, and apply this knowledge to problems involving populations.....	61

Competency 0015 – Understand hypotheses about the origins of life, evidence supporting evolution, and evolution as a unifying theme in biology.....	61
Competency 0016 – Understand the mechanisms of evolution.....	64
Competency 0017 – Understand the principles of taxonomy and the relationship between taxonomy and the history of evolution.....	65
Competency 0018 – Understand the unity and diversity of life, including common structures and functions	66
Competency 0019 – Understand the general characteristics, function, and adaptations of prions, viruses, bacteria, protocists (protists) and fungi.....	66
Competency 0020 – Understand the general characteristics, life functions, and adaptations of plants	68
Competency 0021 – Understand the general characteristics, life functions, and adaptations of animals.....	70
Competency 0022 – Understand the structures and functions of the human skeletal, muscular and integumentary systems; common malfunctions of these systems; and their homeostatic relationships within the body	71
Competency 0023 – Understand the structures and functions of the human respiratory and excretory systems, common malfunction of these systems, and their homeostatic relationships within the body.....	72
Competency 0024 – Understand the structures and functions of the human circulatory and immune systems, common malfunctions of these systems, and their homeostatic relationships within the body.....	74
Competency 0025 – Understand human nutrition and the structures and functions of the human digestive system and accessory organs, common malfunctions of the digestive system, and its homeostatic relationships within the body.....	76
Competency 0026 – Understand the structures and functions of the human nervous and endocrine systems, common malfunctions of these systems, and their homeostatic relationships within the body.....	76
Competency 0027 – Understand the structures and functions of the human reproductive systems, the processes of embryonic development, common malfunctions of the reproductive systems, and their homeostatic relationships within the body.....	79
Competency 0028 – Understand the characteristics of populations and communities and use this knowledge to interpret population growth and interactions of organisms within an ecosystem.....	80
Competency 0029 – Understand the development and structure of ecosystems and the characteristics of major biomes	83
Competency 0030 – Understand the connections within and among the biogeochemical cycles and analyze their implications for living things.....	84
Competency 0031 – Understand concepts of human ecology and the impact of human decisions and activities on the physical and living environment.....	86
Sample Problems	87
Answers to sample problems	95
Constructed-Response Assignment	97
Glossary	101
References.....	108
