

## Table of Contents

Suggestions for the Day of the Exam .....	5
Multiple Choice Test Taking Strategies .....	6
Strategies for the New York State Teacher Certification Examination .....	7
Constructed-Response Assignment .....	11
The New York State Teacher Certification Examination: General Information .....	12
Learner-Centered Proficiencies .....	13
Cooperative Learning.....	14
Bloom’s Taxonomy of Levels of Thinking .....	15
New York State Code of Ethics for Educators .....	16
Background on the Development of the Code.....	17
Test Competencies: Field 08: Earth Science .....	19
Discussion of Competencies.....	28
<b>Competency 0001</b> - Understand the general relationships and common themes that connect mathematics, science, and technology.....	28
<b>Competency 0002</b> – Understand the historical and contemporary contexts of the earth sciences and their application to everyday life .....	29
<b>Competency 0003</b> – Understand the process of scientific inquiry and the role of observation and experimentation in explaining natural phenomena.....	30
<b>Competency 0004</b> – Understand the processes of gathering, organizing, reporting, and interpreting scientific data; and apply this understanding in the context of earth/space science investigations.....	39
<b>Competency 0005</b> – Understand types and uses of natural resources, the effects of human activities on the environment, and the need for stewardship to preserve the environmental integrity of Earth systems .....	37
<b>Competency 0006</b> – Understand how to create, use, and interpret physical and mathematical models (e.g., maps, charts, graphs, diagrams) commonly used in earth/space science.....	39
<b>Competency 0007</b> – Understand equipment and materials used in earth/space science investigations, and apply procedures for their proper and safe use. ....	42
<b>Competency 0008</b> – Understand the structure, composition, and features of the Earth, moon, and Sun and the role of technology and exploration in obtaining knowledge about the Earth, moon and sun system.....	47
<b>Competency 0009</b> – Understand the interactions among the components of the Earth, moon, and sun system (including energy transmission and absorption.....	49
<b>Competency 0010</b> – Understand the scale and organization of the solar system, the role of gravity in the solar system, and characteristics of the bodies within the solar system.....	51
<b>Competency 0011</b> - Understand the properties, motions, and life cycles of stars and the methods and technology used to study them .....	52
<b>Competency 0012</b> – Understand evidence regarding the origin, age, size, structure, scale, and motions of the universe, the Milky Way galaxy, and the solar system.....	55
<b>Competency 0013</b> – Understand the composition, structure, and properties of the earth’s atmosphere and the mechanisms and effects of energy transfer involving the earth-atmosphere system.....	57

<b>Competency 0014</b> – Understand the properties of water, conditions in the atmosphere that favor phase changes, and the energy relationships among phase changes, to cloud formation, and precipitation .....	68
<b>Competency 0015</b> – Understand characteristics of weather systems and local weather, the relationship between them, and the methods and instruments used to collect and display weather data .....	60
<b>Competency 0016</b> – Understand the impact on humans and the principles and technology of weather forecasting .....	64
<b>Competency 0017</b> – Understand the locations and characteristics of the Earth’s major climatic regions and analyze factors that affect local climate and the relationship between weather and climate .....	65
<b>Competency 0018</b> – Understand the impact of human activities and natural processes on the atmosphere, theories about the long-range effects of human activities on global climate, and methods of controlling and minimizing these effects .....	66
<b>Competency 0019</b> – Understand geochemical systems, the processes of mineral and rock formation, the characteristics of different types of minerals and rocks, and the methods used to identify and classify them .....	68
<b>Competency 0020</b> – Understand the structure of Earth, the dynamic forces that shape its surface, theories and evidence of crustal movements, and the effects of crustal movements on landscapes .....	69
<b>Competency 0021</b> – Understand weathering-erosional-depositional processes that change the Earth’s surface and the relationship between these processes and landscape development .....	71
<b>Competency 0022</b> – Understand characteristics of the major geologic time divisions and theories and supporting evidence regarding the Earth’s geologic history and the evolution of life .....	73
<b>Competency 0023</b> – Understand the processes by which water moves through the hydrologic system, and use this knowledge to analyze local water budgets .....	77
<b>Competency 0024</b> – Understand the processes by which water moves on and beneath the earth’s surface .....	78
<b>Competency 0035</b> – Understand the structure, composition, and properties of Earth’s oceans and the causes and properties of currents and waves .....	80
Appendix A – Safety Symbols Examples .....	82
Appendix B – Constants and Formulas .....	83
Sample constructed-Response Assignment .....	84
Sample Problems .....	87
Answers to Sample Problems .....	98
Miscellaneous Solutions to Sample Problems .....	99
Glossary .....	100
References .....	110
